Sequence 363 Application US/08961527
Patent No. 6420135
GENERAL INFORMATION:
APPLICANT: Charles Kunsch
TITLE OF INVENTION: Streptococcus pneumoniae Polynucleotides and Sequences
NUMBER OF SEQUENCES: 391
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2839 aceaerecriceecricacarcaaceaerecercaecercaecaacaacairca 2898

(lam-long), Vector: pSport1; Site_1: Sal1; Site_2: Not1;
An unidirectional cDNA library generated from
[Inflorescence at begining of development (lcm-long)].
CDNA was prepared from polyA+ mRNA using SuperScript
Plasmid System Kit (Invitrogen). The double-strand cDNAs
were fractionated in a sepharose CL-2B 40cm-columns and
fragments sizing between 0.8 and 1.5 Kb were
directionally cloned into the vector. Details of each
source of RNA and library construction can be obtained at

Martin D, Hamel J, Rioux C;

Brodeur BR,

WPI; 1996-443187/44. N-PSDB; AAT39039. Neisseria meningitidis antigen, highly conserved between different strains - useful for prodn. of antibodies for immunisation against, diagnosis of, N. meningitidis infection.

or

Claim 7; Fig 1; 117pp; English.

A proteinase K resistant surface protein has been isolated from 4 strains of N. meningitidis (AAT39039 to AAT39042). The isolated 22 kD antigen, antigenic fragments of antibodies can be used in a vaccine for the prevention of infection by N. meningitidis or by N. gonorrhoeae in

```
humans. The antibodies may also be used diagnostically to detect N. meningitidis infection. The antigen may also be used to detect antibodies specific to N. meningitidis antigen. DNA sequences encoding the antigen, or their fragments, can be used as probes for the detection of pathogenic Neisseria bacteria. (Updated on 16-OCT-2003 to standardise OS field)

A mammalian cell receptor, useful in the treatment of cancer by binding to tumor associated lipids where the binding induces anergy or apoptosis cells and antigen presenting cells.

Disclosure; Page; 167pp; English

The invention relates to a mammalian cell receptor, useful in the treatment of cancer, which binds to tumour associated lipids and induces anergy or apoptosis in the T cells and antigen presenting cells (APCs). Also included are a mammalian cell useful in the treatment of cancer where the receptor which binds tumour associated lipids and induces cellular inactivation or death is deleted or functionally deactivated, producing (M1) a tumouricidal immunocyte population in vivo in a mammal (by allowing tumour associated lipids to contact immunocytes in which receptors for immunosuppressive fatty acids, ceramides, glycolipids, sphingolipids, glycosphingolipids, phosphosphingolipids, gangliosides,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                         The invention describes a receptor in a mammalian cell that inhibits regular activation by receptors specific for lipid-based tumour associated antigen. The receptor has cytostatic and antimicrobial properties and is suitable for use in gene therapy. The receptors, methods and compositions are useful for treating a neoplastic disease or tumour (cancer), and infectious diseases. This is the amino acid sequence of Neisseria meningitidis lipopolysaccharide (LPS) to which tumour cells

The invention relates to a process for producing an outer membrane vesicle (OWV) preparation from a bacterium. The process involves disrupting the bacterial membrane substantially in the absence of decoxycholate detergent or other detergent, followed by several centrifugation steps. Membrane disruption is achieveded by several homogenisation, microfluidisation, cavitation, osmotic shock, grinding, French press, belnding or any other physical technique. The outer membrane vesicles can be prepared from bacteria of the genera Moraxella, Shigella, Pseudomonas, Treponema, Porphyromonas, Helicobacter or Nisseria, and are particularly produced from Neisseria meningitidis (especially serogroup B) or Neisseria gonorrhoeae. The invention also relates to a Neisseria meningitidis outer membrane vesicle composition in which the vesicles include the immunogens NSPA (Neisserial surface
                                                                                                                                                            Producing an outer membrane vesicle (OMV) preparation from a bacterium, useful as a vaccine against Neisseria meningitidis serogroup B, comprises disrupting the bacterial membrane in the absence of deoxycholate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      protein A; ADL16114), 287 protein (ADL16113) and 741 protein (ADL16112); and the use of outer membrane vesicle compositions as a medicament, especially for raising an immune response in a patient. The method is useful for manufacturing an outer membrane vesicle preparation as a vaccine against Neisseria meningitidis serogroup B. The present sequence represents Neisseria meningitidis NspA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

The invention relates to an isolated reloided Neisserial surface procein alvention relates to an insolated reloided Neisserial surface procein invention also relates to the method of refolding an NspA protein; an alkaline refolding buffer comprising ethanolamine and SB-12 (3-carrier and optionally one or more other Neisserial antigens; a method of preventing or treating a Neisserial infection; an antigens; a method of preventing or treating a Neisserial infection. NspA has conserved in indicate that it is a potential vaccine candidate for the Aspa protein; and diagnosing a Neisserial infection. NspA has consecuted indicate that it is a potential vaccine candidate for the development of subunit vaccines for the treatment of infections caused by Neisseria meningitidis (meningococcus), which causes invasive bacterarial diseases such as bacteraemia and meningitis, or Neisseria condocred by Neisseria meningitidis (maningococcus), which causes invasive bacterarial diseases such as bacteraemia and meningition and it could consorthoea, the causative agent of gonorrhoea. Recombinantly produced proteins are also be used in the development of new antimicrobial agents, diagnostic tests and in drug screening. However, recombinantly produced proteins are frequently unable to adopt their biologically active conformations, and yields may be very low due to mis-folding and aggregation of the protein. The method of the invention provides an improved method for refolding the protein form partly purified inclusion bodies in amounts up to 100% without the need for further purification. The refolded Neph protein is useful for preparing a composition for diagnosing, treating or preventing infection caused by Neisseria meningitidis or Neisseria gonorrhoeae. The meningitidis H44/76.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF 120

The present invention relates to a pharmaceutical composition comprising a liposome associated with an isolated polypeptide derived from Neisseria meningitidis strain 608b, where the polypeptide is the NspA protein. The composition is useful for inducing an immune response against N. meningitidis, for preventing and/or treating N. meningitidis infection and for treating and/or preventing neisserial infection chosen from N. meningitidis, N. gonorrhoeae, N. lactamica and N. polysaccharea. It is useful for treatment or prophylaxis of meningitia and meningoccaemia, in a host. The host is a mammal, preferably a human and more preferably an adult human. The present sequence is the Neisseria meningitidis strain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF 120

The invention relates to a novel composition comprising outer-membrane vesicles (OWV) prepared from a first strain of Neisseria meningitidis and 1 or more proteins which are present in OWVs prepared from a second strain of N. meningitidis, but which are not present in OWVs prepared from the first strain. The composition of the invention demonstrates antibacterial and antihilammatory activities and may be useful in the field of meningococcal biochemistry, in particular the trafficking and localisation of meningococcal infections, as well as in the prevention or treatment of meningococcal infections, possibly via the production of a vaccine or gene therapy. The current sequence is that of a Neisseria meningitidis MCSB outer-membrane vesicle (OWV)-related membrane protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FAVDYTRYKNYKAPSTDFKLYSIGASAIYDFDTQSPVKPYLGARLSLNRASVDLGGSDSF 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
